

Building the Six-Hour Canoe

A guide to building a canoe that contains scale plans, specifications, a tool list, step-by-step instructions, and even a helpful explanation of how to paddle the canoe. All the building operations are clearly illustrated with photos and sketches. The canoe is constructed from a single 4x16 (or two 4 x 8 sheets) sheet of marine plywood and a few pieces of dimensional lumber and, with epoxy glued seams, is watertight from the moment it hits the water. When completed, the canoe is 153 in length with a 31" beam. Inexpensive to build using ordinary tools and materials, the canoe gives everybody access to boatbuilding and a boat.
