

# Latrine Building: A Handbook to Implementing the Sanplat System (Guide to Implementing the Sanplat System)

This book describes a practical solution to the lack of basic sanitation facilities in the form of a Sanplat: a specially designed concrete platform which can be installed easily in rural latrines to improve sanitation and safety. It has footrests to help users find the right position to avoid fouling the latrine; the drop hole is large enough to use comfortably and small enough to be completely safe, even for a child; and it is easy to keep clean. The latrines described here can be built using locally available materials and skills, and are affordable and appropriate to the needs of rural communities.
